

Interested in how to apply Resilient Healthcare or Safety-II to improve patient safety?

Researchers want to explore how Resilient Healthcare and Safety-II have been translated into policy and practice.

We want to explore how people conceptualise Resilient Healthcare, and how it could be, or has been, applied to improve patient safety. We hope to identify ways to support the future translation of Resilient Healthcare into practice.

WHO

We are looking to interview people who work within the NHS to improve patient safety:

- You can hold any role including healthcare professional, quality and safety or risk/governance roles.
- You will work (all or some of the time) in either: maternity, A&E, ICU or anaesthetics.

WHAT

The study involves a **one-off interview** which will:

- Last approximately 60 minutes
- Be arranged for a time that suits you
- Take place online or by telephone.

There are no right or wrong answers!

We will share the findings with you to help facilitate learning!

CONTACT
